Acknowledgments

The Civil War and the Meaning of Liberty was developed by the Choices Program with the assistance of scholars at Brown University and other experts in the field. We wish to thank the following people for their invaluable input to the written portion of this curriculum:

FRANÇOISE N. HAMLIN

Associate Professor of Africana Studies and History Brown University

NAOKO SHIBUSAWA

Associate Professor of History, Associate Professor of American Studies Brown University

MICHAEL VORENBERG

Associate Professor of History Brown University

We thank Ada Okun for creating several of the lessons in this curriculum. Thank you to Lindsay Turchan for her contributions to the research and writing.

We are grateful to Daniel Youkilis who wrote the profiles of abolitionists and assisted with editing and fact-checking.

All maps by Gustaf Michaelsen.

Introduction: What is the Meaning of Liberty?

The Civil War (1861-1865) was one of the most important events in U.S. history. It continues to evoke strong emotions—and raise important questions—for Americans today. More Americans died in the Civil War than in any other war. Historians estimate that between 620,000 and 750,000 Americans died in the conflict. Almost every person in the United States knew or was related to someone who died in the war.

In addition to the war's terrible violence, the Civil War affected all aspects of life in the United States. At its center was a dispute over whether slavery would continue to exist in the United States. More than just an issue about race and racism, the contest over slavery fundamentally concerned land, labor, and the future of the economy as well.

In an 1864 speech, President Abraham Lincoln discussed a fundamental disagreement at the center of the Civil War: What does liberty mean? Whose liberty, and what kind of liberty, should the United States prioritize? Did liberty mean that the United States should abolish slavery and that enslaved people should achieve freedom? Or did liberty mean protecting the ability of slaveholders to own people as property and exploit their labor?

CWe all declare for liberty, but in using the same word we do not all mean the same thing. With some the word liberty may mean for each man to do as he pleases with himself, and the product of his labor; while with others the same word may mean for some men to do as they please with other men, and the product of other men's labor. Here are two, not only different, but incompatible things, called by the same name—liberty. And it follows that each of the things is, by the respective parties, called by two different and incompatible names—liberty and tyranny."

—President Abraham Lincoln in a speech on April 18, 1864

Introduction Definition

Civil War—A civil war is a war between the people of the same country.

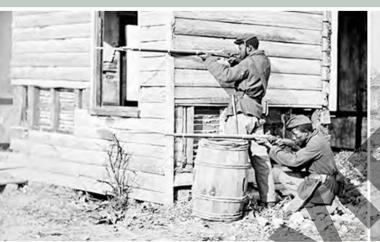

Lincoln was interpreting liberty in only two ways: the liberty from slavery and the liberty to own enslaved people. Yet the people living in the United States from 1830 through 1865 also defined liberty and tyranny in other ways. Through readings and lessons, you will explore the meaning of liberty for different groups—white people, native people, black people, men, and women—in the years leading up to the Civil War.

In Part I of the reading, you will consider the relationships between slavery, race, the growth of the economy, and the acquisition of territory and dispossession of native people from their lands by the United States. In Part II, you will examine the abolition movement and see how growing disagreements over slavery led to increasing political tensions and, eventually, the Civil War. In Part III,

President Abraham Lincoln, February 9, 1864.

The Geography of Slavery and the Cotton Economy: 1830-1860

Objectives:

Students will: Explore the relationship between the expansion of slavery and the cotton boom in the antebellum United States.

Map demographic and economic data.

Identify patterns and trends in data and note change over time.

Required Reading:

Students should have read Part I and completed "Study Guide—Part I" (TRB 3-4) or "Advanced Study Guide—Part I" (TRB-5).

Videos:

"What are some common misconceptions about slavery in the United States?" (Emily Owens)

"Why does the misperception that slavery only happened in the southern United States exist?" (Christy Clark-Pujara)

Videos are available at <www.choices.edu/ civilwar>.

Handouts:

"Maps—The United States in 1830 and 1861" (TRB 8-9)

"U.S. Population Data" (TRB 10-12)

"Questions—U.S. Population Data" (TRB-13)

"Economic Data" (TRB-14)

"Questions—Economic Data" (TRB-15)

In the Classroom:

1. Introduction—Begin class by showing the videos, "What are some common misconceptions about slavery in the United States?" with Professor Emily Owens and "Why does the misperception that slavery only happened in the southern United States exist?" with Professor Christy Clark-Pujara. Where did slavery exist in the United States? Who benefited from slavery?

Tell students that they will be analyzing historical data about the U.S. population and economy in order to consider the relationship between slavery and cotton production in the early United States.

2. Analyze and Map Population Data—Distribute the population data and questions and the two maps. Remind students what a census is. Have students follow the instructions.

3. Analyze and Map Economic Data—Distribute the economic data and questions. Have students follow the instructions.

4. Share Findings—Reconvene the class. What does the data illustrate about the population of the antebellum United States? Where was slavery most concentrated? How did the population change over time? What else did students observe?

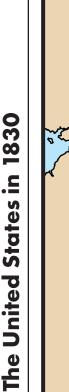

Review the second data set with students. What does the data illustrate about cotton's role in the U.S. economy? Where in the data do students see evidence that cotton was a major part of the U.S. economy? How did this change over time? Which states produced the most cotton? What else did students observe?

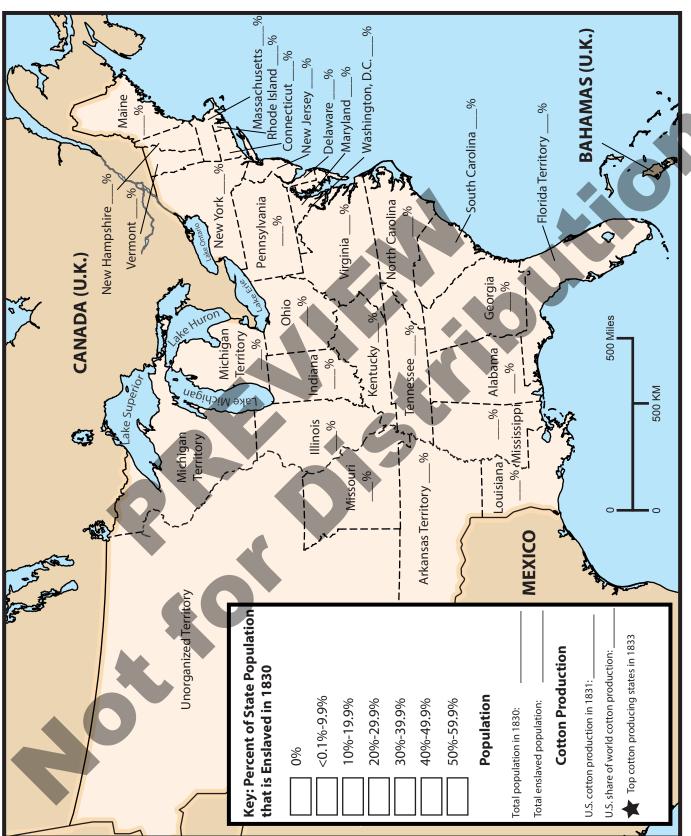

Have students compare their maps. What do the maps show about changes in the U.S. population and economy between 1830 and 1860? Do students see connections between the population and economic data? How does the data connect to what students learned about the forced migration of enslaved people southward and westward to cotton producing regions? How does this data connect to what students learned about how the forced labor of enslaved people fueled the national economy?

5. Conclusion—Ask students to revisit the ideas presented in the videos. Clark-Pujara states that, "When people say that the United States was built on slavery, that's not a metaphor, that's just a statement of fact, a statement of what happened." Can students give examples of ways the country was "built on" slavery?

Homework:

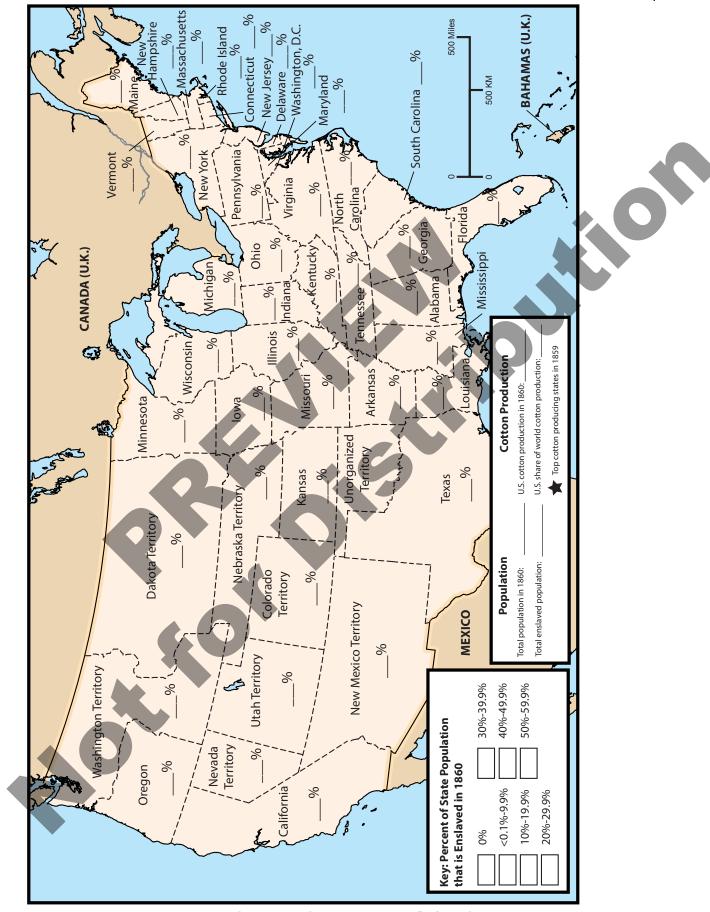

Students should read Part II and complete "Study Guide—Part II" (TRB 23-24) or the "Advanced Study Guide—Part II" (TRB-25).

The United States in 1861

Table 2: 1860 U.S. Census Data

United States Census Bureau 1860 Census: Population of the United States https://www.census.gov/library/publications/1864/dec/1860a.html

Note on Changing Borders in 1860 and 1861

The eighth United States census was conducted in 1860. By the time the results were published, several new states and territories had been established. For example, in 1861, the eastern part of Kansas Territory became the state of Kansas, and several other new territories, such as Colorado Territory, Dakota Territory, and Nevada Territory, were established. These states and territories were included in the publication of the 1860 census data. The map that you will be working with reflects U.S. borders as of 1861 to more closely match the census data as it was published.

Additionally, complete census data for the area labeled Unorganized Territory on the map is not available. You do not need to shade in this territory on the map.

Table 3: Percent Increase in the Enslaved Population by State or Territory, by decade, 1790-1860

This table shows the percent increase in the population of enslaved people in each state or territory over the course of ten-year time periods. The percent change tells us how large the increase or decrease in the number of enslaved people was during a certain time period relative to the number of enslaved people at the beginning of that time period. For example, a 100% increase means that the population doubled during the time period. The percent change \div by the original amount) x 100.

State or Territory	1790- 1800	1800- 1810	1810- 1820	1820- 1830	1830- 1840	1840- 1850	1850- 1860	
Delaware	30.8	32.1	7.9	27.0	20.9	12.1	21.5	
Maryland	4.5	6.8	2.7	3.9	13,4	1.1	3.9	
Virginia	18.6	13.7	8.3	10.4	4.5	4.9	3.9	
North Carolina	32.3	26.7	21.4	19.9	0.1	17.4	14.7	
South Carolina	36.5	34.4	31.6	22.0	3.7	17.7	4,5	Γ
Georgia	103.0	77.1	42.2	45.4	29.2	35.9	21.1	1
Florida					65.9	52.9	57.1	
Kentucky	224.6	99.7	57.3	30.4	10.3	15.8	6.9	
Tennessee	297.5	227.8	79.9	76.8	29.3	30.8	15.1	
Alabama		419.2	1,532.7	180.7	115.7	3.5.2	26.9]
Mississippi		384.9	125.9	100.1	197.3	58.7	40.9	
Louisiana			99.3	58.7	53.7	45.3	35.5	
Arkansas			1,089.0	183.0	335.6	136.3	135.9	
Texas							213.9	
Missouri			255.5	145.5	132.1	50.1	31.5

Questions—U.S. Population Data

Instructions: Answer the questions below using data from "U.S. Population Data." Follow the instructions to fill in the maps, "The United States in 1830" and "The United States in 1860."

Part I: Analyzing and Mapping 1830 Census Data

- 1. On the map. "The United States in 1830," fill in the key with the total U.S. population and total number of enslaved people living in the United States in 1830.
- 2. In 1830, which state had the largest number of enslaved people?
- 3. a. Using data from the "Percentage of State Population Enslaved" column of Table 1, label each state on the map with its percentage. (For example, write "38.0%" in the state of Alabama on the map.)

b. Color or shade in all of the boxes in the map key. Each shading should be distinct from others. It will be helpful to use darker or brighter shades for higher percentages.

c. Shade in each of the states on the map according to its percentage of enslaved people.

Part II: Analyzing and Mapping 1860 Census Data

- 4. In the map key, fill in the total population and total number of enslaved people living in the United States in 1860.
- 5. In 1860, which state had the largest number of enslaved people?
- 6. a. Using data from the "Percentage of State Population Enslaved" column of Table 2, label each state on the map with its percentage. (For example, write "45.1%" in the state of Alabama on the map.)
 - b. Color or shade in all of the boxes in the map key.

c. Shade in each of the states on the map according to its percentage of enslaved people.

Part III: Analyzing Change Over Time

7. Refer to Table 3. For each decade between 1830 and 1860, circle or highlight the percentage of any state or territory in which the population of enslaved people increased by 50 percent or more. List these states here.

8. Based on the data and/or your map, make two observations about how the population of the United States changed from the 1830s to the 1860s. For example, your statements could address how many people were enslaved, where enslaved people lived, or any other patterns or changes that you notice. You should also use examples from the data to support your statement. One example of an observation could be: *"From 1830 to 1860, the number of enslaved people increased by more than 1.9 million people."*

Economic Data

Instructions: Use the following data to answer the questions in "Questions—Economic Data" and to fill in your map.

Table 4: Cotton Production in the United States

The following table includes data about U.S. cotton production, including data that indicates cotton's importance to the U.S. economy as an export. U.S. exports are goods or services that the United States sells to other countries. Total U.S. exports is the value of everything that the United States sells abroad. The column "Cotton as share of all U.S. exports" demonstrates what percentage of that total amount of money comes from selling cotton. For example, if total U.S. exports during a certain year equal 100 million dollars, and the U.S. sale of cotton to people in other countries amount to 40 million dollars, the "Cotton as share of all U.S. exports" column will read 40 percent for that year.

Year	Cotton made in the United States (millions of pounds)	Cotton made in world (millions of pounds)	U.S. share of world production of cotton (millions of pounds)	Cotton as share of all U.S. exports 14% (in 1802) 22% 49% 42%
1791	2	469	<1%	ld: Slav
1801	40	531	8%	14% (in 1802)
1811	67	556	12%	22%
1821	150	630	24%	49%
1831	322	820	39%	42%
1841	559	1,044	54%	42% 52%
1851	1,120	1,482	76%	63%
1860	1,536	2,500	61%	52% ײַשָּׁטַיאָד אַראָדאָר אַדאָראָדאָד 63% אַדאָדאָדי 61%

State	1791	1801	1811	1821	1826	1833	1834	1839	1849	1859
North Carolina		4.0	7.0	10.0	10.0	10.0	9.5	51.9	29.5	64.6
South Carolina	1.5	20.0	40.0	50.0	70.0	73.0	65.5	61.7	120.0	141.0
Georgia	0.5	10.0	20.0	45.0	75.5	88.0	75.0	163.4	199.6	312.3
Florida					2.0	15.0	20.0	12.1	18.0	29.9
Alabama				20.0	45.0	65.0	85.0	117.1	225.8	440.5
Mississippi				10.0	20.0	70.0	85.0	193.2	194.0	535.1
Louisiana			2.0	10.0	38.0	55.0	62.0	153.9	71.5	311.0
Texas									23.2	193.1
Arkansas					0.5	0.8	0.5	6.0	26.1	163.0
Tennessee		1.0	3.0	20.0	45.0	50.0	45.0	27.7	77.8	132.0
All other states		5.0	8.0	12.0	25.0	13.0	10.0	4.5	1.6	24.7

Table 5: Cotton Production by Individual States in Millions of Pounds

Questions—**Economic Data**

Instructions: Answer the questions below using data from "Economic Data." Follow the instructions to fill in the maps, "The United States in 1830" and "The United States in 1861."

1. Complete the statements below, using data from Table 4. Then fill in the key on the maps of the United States in 1830 and 1861.

a. In 1831, the United States produced _____ million pounds of cotton. This was _____ percent of all of the cotton produced in the world that year.

b. In 1860, the United States produced _____ million pounds of cotton. This was _____ percent of all of the cotton produced in the world that year.

- 2. Refer to the column "Cotton as share of all U.S. exports" in Table 4. By 1860, of the total value of all goods that the United States exported, what percent was from cotton?
- 3. a. Refer to Table 5. In 1833, which five states produced the most cotton?

b. On the map of the United States in 1830, mark these five states with a star.

4. a. Refer to Table 5. In 1859, which five states produced the most cotton?

b. On the map of the United States in 1860, mark these five states with a star.

5. Based on the data and/or your map, make two observations about how cotton production in the United States changed from the 1830s to the 1860s. Your statements could address how much cotton was produced, where it was produced, what role it played in the U.S. economy, or any other patterns or changes that you notice. You should also use examples from the data to support your statement. One example of an observation could be: "Cotton production increased significantly in the United States from the 1830s to the 1860s, from 322 million pounds in 1831 to 1,536 million pounds in 1860."
